10/764, 235

In re/ Application of O'Mahony and Lambkin Application No. 10/764,235

Atty. Docket No. P26479-B USA June 28, 2006 Page 2

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims

- 1. (Canceled).
- 2. (Previously presented) A composition comprising a peptide having an amino acid sequence as set forth in SEQ ID NO: 24.
- 3. (Canceled).
- 4. (Previously presented) The composition of Claim 2, further comprising an active agent, wherein said peptide is complexed to said active agent.
- (Canceled).
- 6. (Previously presented) The composition of Claim 2, further comprising an active particle, wherein said peptide is complexed to said active particle.
- 7. (Currently amended) A method for enhancing movement of an active agent across a lipid membrane, comprising a <u>administering the composition of claim 4 to said membrane complex</u> selected from the group consisting of a MTLP active agent complex and a MTLP active particle complex, wherein the <u>peptide MTLP</u> enhances movement of the active agent across the lipid membrane.
- 8. (Currently amended) A method for enhancing movement of an active particle across a lipid membrane, comprising a <u>administering the composition of claim 4 to said membrane</u>

 MTLP active particle complex, wherein the <u>peptide MTLP</u> enhances movement of the active particle across the lipid membrane.

Atty. Docket No. P26479-B USA June 28, 2006 Page 3

- 9. (Canceled) A method for identifying a derivative of a MTLP having enhanced ability to transport an active agent across a lipid membrane, wherein the derivative of the MTLP competes for transport of fMLP across a membrane selected from the group consisting of a cell membrane, an intracellular membrane, the apical and basal membranes of an epithelial cell layer.
- 10. (Canceled) The membrane of claim 9, wherein the epithelial cell-layer is a polarized epithelial cell-layer.
- 11. (Currently amended) A method for treating a pathological disorder in an animal, comprising orally administering to the animal in need of such treatment the composition of claim 4 a complex selected from the group consisting of a MTLP active agent complex and a MTLP active particle complex, wherein an amount of the active agent effective to treat the pathological disorder is moved across the gastrointestinal epithelium of the animal into the circulation.
- 12. (Previously presented) A composition according to Claim 4, wherein the active agent is a viral DNA particle.
- 13. (Currently amended) A composition according to Claim 12, wherein the DNA is in the form of complexed with a membrane translocating peptide (MTLP)-coated liposome.
- 14. (Currently amended) A pharmaceutical composition comprising a—peptide the composition according to Claim 2 and a pharmaceutical carrier.
- 15. (Previously presented) A pharmaceutical composition according to Claim 14, adapted for oral administration.

16 to 18. (Canceled)

19. (Previously presented) A composition for use in membrane translocation, the composition consisting of an MTLP comprising an amino acid sequence of SEQ ID NO: 24.

In re/ Application of O'Mahony and Lambkin Application No. 10/764,235

Atty. Docket No. P26479-B USA June 28, 2006 Page 4

- 20. (Previously presented) A composition of Claim 19, wherein said MTLP is complexed to a liposome.
- 21. (Previously presented) A pharmaceutical composition comprising a composition according to Claim 19 and a pharmaceutical carrier.
- 22. (Previously presented) A pharmaceutical composition according to Claim 20, adapted for oral administration.
- 23. to 30. (Canceled)
